

Swivel Rack Frames

404091

Product description

RACK FRAMES

In order to achieve the highest possible stability, the rack frames are made of sheet steel.
They are equipped as standard with hinges that allow 180 degrees of opening/exit.

The building depth between the door and the rack frame is 105mm.
Maximum installation depth of the equipment in the frame at 800 mm wide cabinets = 395 mm (700 mm wide cabinets = 300 mm).

Thanks to their special design, the rack frames are also easy to install in the cabinets.

Shorter frames can be delivered as a special door, or as a 19" perforated door.

Colour: RAL 7035
